Meat Processing

ADVANCED TECHNOLOGIES

We develop and build high quality, energy efficient and environmentally friendly refrigeration, storage and ripening systems that ensure the long-term preservation and freshness of your products.

Careful use of energy is directly related to cost-effectiveness and successful operation of any company. Green Refrigeration refrigeration systems are designed to ensure maximum energy efficiency.

We meet your needs regarding the manner of assembly, completion date and specifics of the installations, regardless of their size (small commercial refrigeration chambers or bigger industrial cold storage capacities).
